

Q1 - FILE CREATION USING CREATENEWFILE()

SOURCE CODE

```
import java.io.File;
import java.io.FileWriter;
import java.io.IOException;

public class Q1 {
    public static void main(String[] args) {
        try {
            File f = new File("data.txt");
            f.createNewFile();
            FileWriter w = new FileWriter(f);
            w.write("Hello World");
            w.close();
            System.out.println("File created and data written");
        } catch (IOException e) {
            e.printStackTrace();
        }
    }
}
```

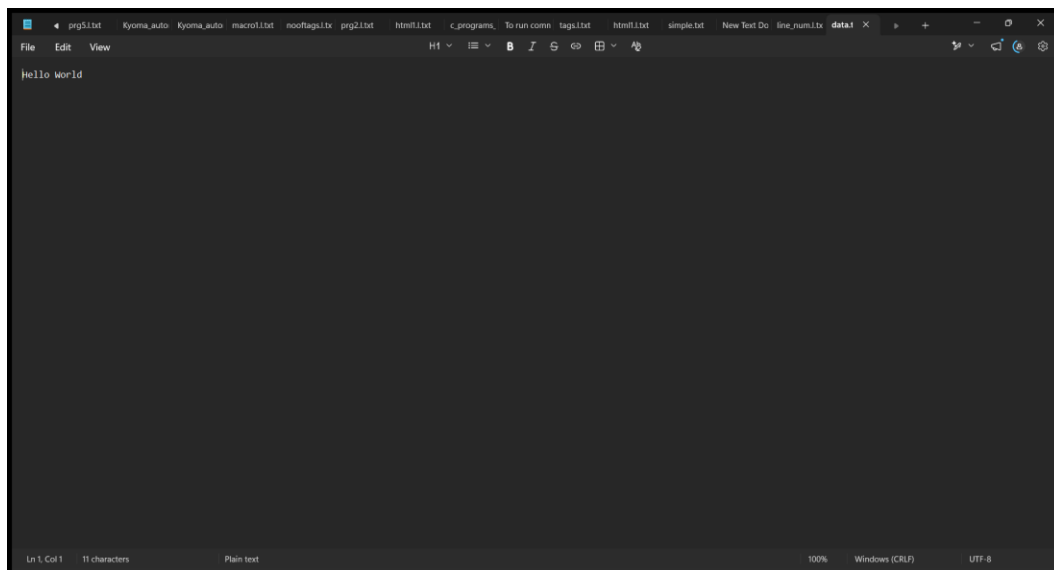

PROGRAM OUTPUT

A screenshot of a console window titled "Q1 Console Output". The window has a dark background and a light-colored text area. The text "File created and data written" is displayed on the first line, and "c:\harsha studies\Java>" is displayed on the second line. The window has standard Windows window controls (minimize, maximize, close) in the top right corner.

```
Q1 Console Output
File created and data written
c:\harsha studies\Java>
```

FILE CONTENT (data.txt)

A screenshot of a text editor window with multiple tabs. The active tab is "data.txt". The text "Hello world" is written on the first line. The editor has a dark background and a light-colored text area. The status bar at the bottom shows "Ln 1, Col 1", "11 characters", "Plain text", "100%", "Windows (CRLF)", and "UTF-8".

```
data.txt
Hello world
```
